Giancarlo Zema Design Group

Innovative Ecosustainable Architecture Studio

The Giancarlo Zema Design Group (GZDG) is an innovative architecture firm based in Rome. The studio aims to develop smart eco-sustainable projects, intelligent infrastructure, self-sufficient floating habitats, intriguing yacht and interior design. Founded in 2001 by the architect and entrepreneur Giancarlo Zema as a dynamic and flexible organisation, it covers the entire design process, from concept to the executive details.

The main characteristics of our emotional design are soft lines that clearly recall biomorphic forms. We believe that only when architecture and design blend with each other, something new has been created. With our work group, we research, develop and combine the best technologies available on the global market, enriching our projects with highly innovative systems and contents, becoming pioneers in the various design sectors.

Our projects are frequently shown in international exhibitions, TV programmes and published in the most important architecture, design, nautical and scientific magazines and books. We are exhibited by cultural institutions including La Triennale Milan Design Museum, The Venice Biennale, Ara Pacis Museum, Farnesina Design, that recognize our bold creativity and profound innovative strength.

BAOBAB | Eco-Sustainable Vertiport
